PERFECT 

ADVANTAGES / BENEFITS – ADVANT

PERFECT HYDRAULICS!

- » Optimized flow characteristics created within the whole channel due to the precise drop in channel and pipe connection.

- » Unwanted turbulences and pile-up zones in the sewer system can be avoided by a constant decline in the whole channel - including pipe connection and decline within the manhole base.

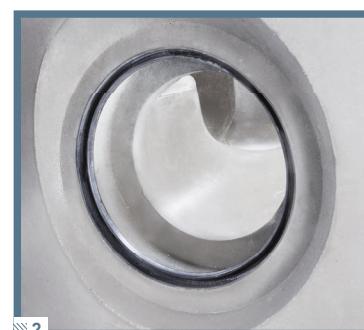

PRECISE CONNECTIONS FOR EACH SINGLE PIPE!

- » Wetcast manhole components cast in one pour guarantee highest quality with leak-proof and safe connections.

- » Due to the use of integrated gaskets it is no longer necessary to mount gaskets on site.

- » Due to the exact design of the decline and angle of the pipe connection it is possible to connect all pipe types easily, quickly and securely.

- » 1
The principle of the integrated gaskets: Firm connection with the concrete manhole by production in one cast.

- » 2
Due to the use of integrated gaskets damages during the transport and the storage of the components can be avoided.

ANTAGES / BENEFITS – ADVANTAGES / BENEFITS – ADVANTAGES / BENEFITS – ADVANTAGES / BENEFITS – ADVANTAGES

 HIGH WASTE WATER RESISTANCE!

- » PERFECT manhole bases are ideally suited to storm drain and sewage systems.
 - » Homogeneous surfaces in the channel as well as the low water penetration depth ease flow characteristics and minimize the duration while waste water stays in the manhole.
 - » In the case of further requirements concerning waste water resistance PERFECT manhole bases can be cast with high performance concrete. These kind of PERFECT manhole bases show even higher resistance against chemical aggression.

 PLANNING LIBERTY!

- ❖ Determination of the ideal channel configuration in the manhole base without technical restrictions in the planning phase.
 - ❖ All shaft parameters like number, type, angular position and inclination of in- and outlets are executed exactly and individually.
